MoveInSync | Forward Deployed Engineer (Intern to FTE)
Candidate Assignment

ABOUT MOVEINSYNC

MoveInSync helps companies run the daily journey of their employees to and from work. More than 1.5 million employees use it every working day, across 430+ enterprise customers.

Here's what that journey looks like for one employee. Their company onboards them onto MoveInSync, and their shift or roster is set. Then comes the step that matters most: the employee books their own ride in the app, based on their shift. Self-booking is the primary way trips get created. The system takes those bookings, assigns a cab or shuttle, and plans the route around everyone else traveling that day. Before the shift, the employee gets a pickup time, tracks the vehicle live, and boards with safety checks like OTP and driver verification. They get dropped at the office or at home. If something goes wrong (a late cab, a wrong route, a booking that fails, an app glitch, a safety concern), they raise it, and it travels back through the operations team to the company's transport desk and to us.

The employee's phone is where all of this happens. Employees rate and review our apps on the Play Store, and they do it openly.

THE PROBLEM

Our Play Store ratings are lower than they should be, and we need to improve them. That is your job.

Work out why the ratings are where they are, then tell us exactly what you would do to raise them: what to fix and what to do first. We'll act on your recommendations, so be specific enough that a product or engineering team could start the next day.

How you find the data, what you do with it, and what you hand back are your call.

THINGS TO KNOW

- We haven't prepared any data for you. Everything you need is publicly available.
- Use any tools you like, AI included.
- “How are our Play Store ratings?” - this is a question we'll keep asking from time to time. It is not a one-time ask.
- Reasonable assumptions, clearly stated, are fine.

WHAT TO SUBMIT

Your recommendation, in whatever form you think will get it acted on. Alongside it, a short note on how you got there and which tools you used.
