# Forward Deployed Engineer

*Internship to Full-Time*

**MoveInSync | Bangalore | CTC(on FTE Conversion): ₹9.5 LPA (₹9L fixed + ₹50K variable) | Paid Internship (35K per month) → FTE Conversion**

---

## ABOUT MOVEINSYNC

MoveInSync is India's largest employee transportation management platform, powering safe, efficient commutes for 1.5M+ employees across 430+ enterprise customers.

Our platform handles live fleet operations, route optimization, driver safety, and billing at scale, in real time.x

## THE ROLE

Enterprise customers often have problems our product doesn't solve out of the box. **FDEs work directly with these customers to understand the problem and build the solution.**

You'll use **AI coding tools, agents, skills, scripting, and automation** to build fast, practical, and reusable solutions.

This is not a support or traditional implementation. **You don't just configure what's already there — you build what's missing.**

### What you will do

- Work directly with customers to understand their problems.
- Identify product gaps and figure out what should be built.
- Build solutions using AI, code, automation, and agents.
- Turn successful solutions into reusable capabilities.
- Work with Product and Engineering to take solutions to production while owning the problem end-to-end.
- Help other teams adopt the solutions you build.

## WHO WE ARE LOOKING FOR

**Technical + AI-first.** Comfortable with technology, basic scripting, and AI coding tools. You like figuring out how to build or automate things.

**Strong communicator.** Comfortable talking to customers, asking the right questions, and getting to the real problem.

**Problem solver.** Comfortable with ambiguity and figuring things out without a predefined playbook.

**Eligibility:** Open to **all engineering branches**. Experience with scripting, automation, no-code/low-code, or AI tools is a plus.

**Format:** Paid internship with conversion to full-time based on performance.
