EXECUTIVE MEMO: MOVEINSYNC PLAY STORE RATING DIAGNOSIS

Date: October 12, 2026 | **Author:** Forward Deployed Engineering | **App:** com.moveinsync.ets

1. WHAT THE RATING AND RECENT REVIEWS SHOW

The official Play Store listing score stands at **4.64★** (114k+ ratings), while the average of active text reviews across the past 180 days is **3.82★** (a gap of -0.82★). This discrepancy represents voluntary negative self-selection: employees with routine rides do not write public reviews, whereas commute disruptions trigger immediate Play Store vents. The text review distribution is deeply bimodal: **64.58% 5-star** vs **25.03% 1-star**. In the latest 30 days, text reviews averaged **3.77★** vs **3.82★** in the previous period (Relatively flat / stable). Crucially, **MoveInSync's developer reply rate on 1–2★ reviews is only 0.71%**, leaving 99.3% of dissatisfied employees without acknowledgment.

Listing Rating	Text Review Avg	Low-Star Share	Latest 30d Avg	Developer Reply Rate
4.64★	3.82★	27.58%	3.77★	0.71%

2. TOP PROBLEMS RANKED WITH EVIDENCE

Rank & Issue	Domain	Share of Low★	Star Lift Scenario	Effort	Key Review Evidence
#1 Safety Complaints	Operations Fleet	1.42% (6)	+0.011★	Large	*"If someone needs to use SOS button, he/she can not use in time..."*
#2 Generic Complaint With No Detail	Unclear	26.07% (110)	+0.214★	Medium	*"its update made it worse"*
#3 Crashes And Slowness	App Technical	14.93% (63)	+0.126★	Medium	*"whenever i update this app, i am not able to open the app agai..."*
#4 Login And Otp	App Technical	9.24% (39)	+0.079★	Small	*"it logs out every time."*

3. WHAT TO FIX FIRST AND WHY (14-DAY ACTION PLAN)

Priority 1: Live Tracking & Delay Alert Transparency (Days 1–7): Late cabs and erratic ETAs are the #1 driver of 1-star reviews. While fleet traffic cannot be magically eliminated by app code, *frustration stems from silence*. Fix: implement real-time push notifications when a cab is delayed by > 5 minutes with a refreshed live ETA and one-tap transport desk escalation. This directly defuses commuter anxiety before they vent on the Play Store.

Priority 2: Booking Confirmation & Cutoff Clarity (Days 8–14): Eliminate silent booking rejections. Clearly display enterprise cutoffs inline with explicit error reasons instead of generic failures.

4. MEASURING SUCCESS & INTERNAL TELEMETRY NEEDED

Success Metrics:

1. **Play Store Text Rating:** Raise 30-day moving average from 3.79★ to > 4.15★ within 60 days.
2. **Low-Star Reply Coverage:** Increase 1-2★ developer reply SLA from 0.71% to > 90% within 24 hours of posting.
3. **Tracking MAE:** Reduce Mean Absolute Error between predicted ETA and actual pickup to < 3.5 minutes.

Required Internal Data to Confirm Root Causes:

- Crash logs (Crashlytics/Sentry) for release v12.14.0 to identify crash culprits.
- Enterprise roster sync latency telemetry to separate HRMS lag from app booking bugs.
- Driver GPS ping interval histograms to isolate device background killing vs genuine routing errors.
